REDUCTION TIPS

4 VISIT GARAGE SALES!
You will oftentimes find items that are in great condition for half the original selling price.

5 REPAIR APPLIANCES!
Mend clothing and other items where possible. You won't have to dispose of these as quickly.

6 DONATE UNWANTED ITEMS!
Give to non-profit groups or less fortunate individuals. Rent infrequently used items or share items with family and friends.

Deposit **dry cell batteries** in specially marked containers. These can be found in most places throughout the Cayman Islands.

MANAGING WASTE

Start a recycling programme at your office, home or school.

REDUCE YOUR WASTE !

Reducing garbage or avoiding it from the onset is the most effective way to manage garbage/solid waste. Through waste reduction/prevention; items are reused throughout their useful life and less items will need to be landfilled. This will result in a cleaner environment and preserved natural resources for future generations.

Recycling is the process of collecting and processing materials that would be otherwise disposed as trash and turning them into new items.

Recycling reduces the amount of garbage on landfills

6 WASTE

1 PURCHASE REUSABLE ITEMS!

Use these instead of disposable items. Bring your own water bottle to work instead of utilizing single use bottles/cups.

2 AVOID EXCESS PACKAGING!

Less packaging means less raw materials were used in manufacture.

3 BUY IN BULK!

Not only is this a cheaper option but it is an excellent way to reduce waste.

Recycling saves natural resources that sometimes cannot be replaced!

24 HOUR DROP OFF SITE-GEORGE TOWN LANDFILL

accepts

Lead acid batteries-
Vegetative waste-
Ewaste-tyres-used motor
& cooking oil- other bulk
waste items.

Did you know?

Recycling a one (1) gallon plastic milk jug can save enough energy to keep a 100 watt bulb burning for eleven (11) hours.

Buy products made from recycled items.
